SYSTEM 21 DISPLAY MODULE

PM2190

OPERATING INSTRUCTIONS

The PM2190 is an 8-character liquid crystal display.
It can be plugged onto the front panel of any System 21 functional unit to display the
modes and settings of the unit.
The SELECT button can be used to step through the display data.
The meaning of the data displayed is specified in the System 21 manual for data common
to all types of units (general slave data), and in the Operating Card of the functional unit for
type dependent data.
