AUTO PLOT: High-Resolution Graphics with a Few Keystrokes

SIN(X)/XICP

SPIRAL - 500 POINTS

How much is a picture worth? The data flowing out of your powerful Model I/II LNW-80 microcomputer are most easily digested by humans when presented in the form of pictures or graphs. AUTO PLOT from MENLO SYSTEMS will turn your EPSON MX-80, MX-80 F/T, or MX 100 dot matrix printer with GRAFTRAX into an exquisite curve plotting instrument.

Our customers are enthusiastic: "SUPER PROGRAM! BEST WRITTEN AND EASIEST TO USE OF ANY I HAVE PURCHASED . . . (L.S., Cody, WY)" You just write a BASIC subroutine to input the data points. With a few program lines you can calculate mathematical functions, request input from the keyboard, or read data from a disk file - yes, even VISICALC or SCRIPSIT files! By pressing some extra keys you can select from many options. AUTO PLOT does all the rest in minutes.

If you own an LNW-80 with high resolution video graphics, you can watch your plot appear in full resolution on your video screen, before it is printed.

Best of all, you can order AUTO PLOT right now for immediate delivery.

(Model I or II with 48k, 1 disk drive)
on disk with 40 page manual

AUTO PLOT for LNW-80

(+Hi-Res video graphics) \$99.50
